SUMMARY

Full-Stack Software Engineer focused on delivering high-performance, tailor-made IT solutions that solve complex business challenges. Passionate about bridging the gap between scalable engineering (Node.js/NestJS) and intuitive user experiences (React/Next.js). Proven ability to take full ownership of the product lifecycle-from database architecture to production deployment-optimizing performance, accelerating workflows, and reducing time-to-market for B2B and e-commerce clients.

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer (Contract / Freelance) – Custom E-commerce Platform & B2B CRM 2026 – Present

- Designed a highly scalable "Variant-first" database architecture using NestJS, Prisma, and PostgreSQL, ensuring efficient data management for complex product configurations.
- Engineered a zero-latency SPA admin dashboard using React and Tailwind CSS, utilizing URL-based state management and React Query prefetching for instant data insights (LTV, AOV, PPC).
- Delivered a bespoke solution that replaced third-party tools, fully aligning the system with the client's operational workflows.
- Reduced time-to-market by independently managing the full development lifecycle, from schema design to production VPS deployment with Nginx and Cloudflare Tunnels.

Junior Backend developer 2025 – 2026

- Integrated into an agile corporate environment, developing RESTful APIs with JWT authentication and taking full ownership of the users module.
- Improved microservice reliability by implementing asynchronous background tasks using RabbitMQ.

Full-Stack Developer / Founder 2024 – 2025

- Developed 'SpendLog' (Personal Finance Telegram WebApp) using Next.js and MongoDB, integrating AI for real-time multimodal expense recognition.
- Implemented strict security measures including Telegram initData validation.

Backend Developer 2024 – 2025

- Refactored a monolithic codebase, optimizing PostgreSQL database queries and reducing response times.
- Implemented a caching layer with Redis.

CORE SKILLS

PRIMARY STACK	DATABASES & ORMs	INFRASTRUCTURE & DEVOPS	ADDITIONAL EXPERTISE	CORE CONCEPTS
TypeScript JavaScript Node.js NestJS React Next.js Tailwind CSS	PostgreSQL MongoDB MySQL Prisma TypeORM	Docker Redis RabbitMQ Nginx Cloudflare Linux (VPS) CI/CD Git	Python C++ Go C#	REST API, Microservices architecture, Object-Oriented Programming, Algorithms & Data Structures

Education

- COLLEGIUM DA VINCI (Poznań, Poland)
- Bachelor's program in IT / Software Engineering

Academic Achievements

- Top 3 Finalist at the KSE Hackathon 2025
- 2nd place at the Regional Math Olympiad 2024
